Hacktoberfest Swag List

There are many companies giving out free swag for Hacktoberfest and this list seeks to find them all!

Hacktoberfest 2020 Swag List

It's that time of year again! Time to get rewarded for contributing to the Open Source community! Did you know that there are multiple tech companies that participate in Hacktoberfest and give away sweet, sweet swag?

This repo seeks to document all of the companies giving away swag for Hacktoberfest 2020 and how you can get your hands on some free gifts for your time and help.

Hacktoberfest is about making meaningful contributions to open source projects. SPAM for the sake of a T-shirt will not be tolerated

First, [sign up for Hacktoberfest 2020 by clicking this link](#) Then, [read about how to participate in a meaningful way](#).

See [Contributing.md](#) to see how to format your pull request to add a company's swag to the List! For more information regarding this click [here](#).

hacktoberfestswaglist.com

CircleCI

- **Swag:** T-shirt, stickers and Limited Edition Magic Orb Pin
- **Requirements:**
 - 1-3 PRs to receive a sticker pack
 - 4 PRs to receive stickers and a T-shirt
 - Develop one new Orb and get all of the stuff plus a Magic Pin
- **How to sign up:**
 - Challenge 1: Complete a merged or accepted PR to include orb usage on an existing CircleCI config
 - Challenge 2: Develop and publish an orb using the [Orb Development Kit](#). Make sure your orb offers value to other developers!
 - After you are done with any one of the two challenges use [this form](#) to enter your PRs.
- **Notes:** Check out the official website of CircleCI [here](#). PRs must either be merged or tagged with the "Orbtoberfest" label to count.

JetBrains

- **Swag:** Access to all professional developer tools for 3 months, plus 20% off an annual subscription.
- **Requirements:** 4+ submitted PR's.
- **How to sign up:** Please fill out this [Get your Hacktoberfest participant perks from JetBrains](#) form and then make four quality pull requests to public GitHub repositories. Once you register by filling out the form, you will get a 3 month subscription to their professional tools to use after Hacktoberfest!
- **Notes:** You can contact them by sending email to marketing@jetbrains.com and by joining [Discord](#). You can read more about them [here](#).

jiyeonseo commented on 19 Jun

using_db has not been passed when it tried to create in get_or_create

Description

It causes the issue that creates a record in a different DB
I think the argument has been removed in [this commit](#)

How Has This Been Tested?

I test this on my code which is using the secondary DB as a "default"(read-only) and the primary DB as "master"(read and write).

```
async with in_transaction("master") as connection:  
    service_emp = await ServicesEmployees.get_or_create(service_id=service_id, emp_no=emp_no, using_db=connection)
```

“유지보수만 하는 레거시
프로젝트로 전환합니다.
Dead 가 아니고 Done 입니다.”

You may also want to read:

- [*You Probably Don't Need Moment.js Anymore*](#)
- [*You don't \(may not\) need Moment.js*](#)
- [*Why you shouldn't use Moment.js...*](#)
- [*4 alternatives to moment.js for internationalizing dates*](#)

The Moment team has discussed these issues at length. We recognize that many existing projects may continue to use Moment, but we would like to discourage Moment from being used in new projects going forward. Instead, we would like to [recommend alternatives](#) that are excellent choices for use in modern applications today. We would also like to promote the [Temporal](#) addition to the JavaScript language, which is looking for feedback and contributors.

**We now generally consider Moment to be a legacy project in maintenance mode.
It is not *dead*, but it is indeed *done*.**

In practice, this means:

- We will not be adding new features or capabilities.
- We will not be changing Moment's API to be immutable.
- We will not be addressing tree shaking or bundle size issues.
- We will not be making *any* major changes (no version 3).
- We may choose to not fix bugs or behavioral quirks, especially if they are long-standing known issues.

2. 함께 성장할 프로젝트 찾기

[Luxon](#)

Luxon can be thought of as the evolution of Moment. It is authored by [Isaac Cambron](#), a long-time contributor to Moment. Please read [Why does Luxon exist?](#) and the [For Moment users](#) pages in the Luxon documentation.

- Locales: `Intl` provided
- Time Zones: `Intl` provided

[Day.js](#)

Day.js is designed to be a minimalist replacement for Moment.js, using a similar API. It is not a drop-in replacement, but if you are used to using Moment's API and want to get moving quickly, consider using Day.js.

- Locales: Custom data files that can be individually imported
- Time Zones: `Intl` provided, via a plugin

[date-fns](#)

Date-fns offers a series of functions for manipulating JavaScript `Date` objects. For more details, scroll to "Why date-fns?" on the date-fns home page.

- Locales: Custom data files that can be individually imported
- Time Zones: `Intl` provided, via a separate companion library

[js-Joda](#)

js-Joda is a JavaScript port of Java's [Three-Ten Backport](#), which is the base for JSR-310 implementation of the Java SE 8 `java.time` package. If you are familiar with `java.time`, [Joda-Time](#), or [Noda Time](#), you will find js-Joda comparable.

- Locales: Custom data files via add-on module
- Time Zones: Custom data files via add-on module

_onMouseDown not used #1972

! Open brenmcnamara opened this issue on 9 Jan 2019 · 3 comments

brenmcnamara commented on 9 Jan 2019

Hi,

I was looking through the code and saw that the `DraftEditor.react.js` file defined a `_onMouseDown` function [here](#), though that function is not actually being registered with the component. This seemed strange to me since every other handler was registered except this one. It's not being used anywhere. I'm sure this is not causing any bugs at the moment, but it seems like an oversight, so I wanted to create an issue so it's on the radar.

I'd be happy to submit a quick pull request if this is a bug.

niveditc added the [good first issue](#) label on 20 Jan 2019

a field named "items" in InputObjectType occurs TypeError #1150

Open

jiyeonseo opened this issue on 8 Mar · 2 comments

Edit

New issue

jiyeonseo commented on 8 Mar · edited

...

I was trying to `json.dumps` with all inputs and some inputs had `TypeError` when they have a field named "items" like below.

```
class ConfigInput(graphene.InputObjectType):
    items = graphene.List(lambda: AnotherConfigInput)
    ...
```

when I try to `json.dumps` with this input, the error looks like

```
File "/project/venv/lib/python3.7/site-packages/playhouse/mysql_ext.py", line 36, in db_value
    return json.dumps(value)
File "/Users/user/.pyenv/versions/3.7.4/lib/python3.7/json/__init__.py", line 231, in dumps
    return default_encoder.encode(obj)
```

Hmm that isn't very good! We shouldn't be overriding in built class methods. I'm going to mark this as a bug but I don't have much time to work on it at the moment.
