KIP-667: Remove deprecated methods from ReadOnlyWindowStore

Jorge Esteban Quilcate Otoya님이 작성, 9월 08, 2020에 최종 변경

- [Status](#)

- [Compatibility, Deprecation, and Migration Plan](#)
- [Rejected Alternatives](#)

Status

Current state: Under Discussion

Discussion thread: [here](#)

JIRA: [here](#)

Please keep the discussion on the mailing list rather than commenting on the wiki (wiki discussions get unwieldy fast).

Motivation

KIP-358 introduced typed representation for Window Store Interactive Query API (ReadOnlyWindowStore) to improve usability.

On the other hand, Processor API read-write Store APIs are tuned for automation, therefore they should keep the long-based methods to represent time ranges to avoid object allocation.

Deprecation notes for long-based read operations in ReadOnlyWindowStore were added in 2.1.0.

Based on these, this proposal includes:

- Remove deprecated methods from ReadOnlyWindowStore
- Remove deprecation annotation on long-based read operations in WindowStore

All these changes are targeting the next major release. Currently v3.0.

Similar changes for SessionStore are considered in KIP-666, but can be introduced earlier as they do not include removing deprecated methods.

@mf-pherlihy Are you interested in doing further work on this? I'd like to merge the PR, but the test should probably move. If I don't hear back in a couple days, I'll merge this as-is and fix it after.

...

@boneskull Yeah I can finish this up. Just to confirm:

1. Move to `test/node-unit/cli/options.spec.js`
- 2a. Copy `applyExtends` from `yargs` to here with a TODO to swap out once `yargs` is updated?
- 2b. Use `applyExtends` as-is with a TODO to swap out once `yargs` is updated?

boneskull commented on 10 Sep

...

1. Move the test
2. AFAICT you are free to use `applyExtends` as it [has been made part of `yargs`' public API](#). But it sounds like when we upgrade `yargs` we will need to change it? Unclear, since we're pulling it out of `yargs-parser` and not `yargs` itself, right? @bcoe?

🚫 Don't

고객처럼 메인테이너를
대하기

Do make this:

```
AssertionError: expected [ Array(5) ] to deeply equal [ Array(5) ]
```

looks this:

```
1) a suite a spec:  
  
AssertionError: expected [ 'a', 'b', 'c' ] to deeply equal [ 'a', 'x', 'c' ]  
+ expected - actual  
  
[  
  "a"  
+  "x"  
-  "b"  
  "c"  
]
```

In the browser too. Not only in the console.

How can one be more concrete? It's a missing feature, it's very obvious what "concrete thing" is requested here.

Also I'd say this is **the biggest** feature Mocha is missing. Not being able to render diffs is a major drawback!

And don't know what you mean by "continuing lack of tests of the html reporter". All reports of this issue likely will test the HTML reporter. And if you don't want to maintain it, remove it, but do not pretend to support it.
